UNITY

Generate Rewards by Verifying the Telecom Grid from Your Mobile Phone

Powered by Minutes Network Token (MNTx) and World Mobile Chain
under a collaborative strategic partnership.

UNITY

Unity does not utilise your mobile phone to route calls or SMS to your carrier network.

Executive Summary

Unity is the world's first multi-carrier, multi-country mobile edge network, rewarding users for verifying the global telecom grid - a true revolution in crypto reward generation and telecom network verification. With Unity, anyone can turn their mobile phone into a crypto generating device, earning rewards.

Each verification call made through the Unity App tests and strengthens the telecom network, records faults on-chain, and rewards participants. This model mirrors the principles of Bitcoin's Proof-of-Work, but instead of validating blockchain transactions, Unity applies it to live telecom infrastructure, generating real world contributions and value.

The global telecom market is worth around $2 trillion a year. Unity is built to lead in network integrity and verification through a decentralised model. With unmatched global scale enabled by its decentralised edge devices, Unity is the first choice partner for carriers worldwide, delivering both efficiency and enhanced quality to the telecom ecosystem.

Verification & Proof

When Unity identifies a network problem, it is documented automatically.

- Critical metadata is captured and immutably hashed to WMChain by Earth Nodes.

- Carriers gain verifiable proof of faults, delivered instantly with a full report.

- API access and immutable on-chain storage provide visibility and provable data transparency for carrier customers.

- Participants earn crypto rewards for their contributions through this innovative, low-entry method of real-world crypto mining.

Offering a unique, revolutionary mining approach that solves real-world telecom problems via decentralised power and storing a permanent, on-chain record of network integrity and issues found.

Products & Offerings

Unity Node Offering

A total of 6,000 Unity Nodes will be available, presenting a unique opportunity for participants to own part of the infrastructure in this new decentralised version of telecom verification and quality assurance.

Unity Node Specifications:

- Availability: 6,000.

- 1 Unity Node NFT: Transferable and sellable.

- 200 Unity License NFTs.

- * Token Allocation: $1,875 MNTx + $1,875 WMTx tokens included, locked and staked for 24 months.

- Price: 5,000 USD.

Unity Nodes include $1,875 MNTx and $1,875 WMTx* is included in the purchase of each Unity Node.

If the node is unstaked, it becomes available to claim.

In conformity with their respective tokenomics rules, all MNTx tokens are being released from the MNTx Network Expansion Pool and WMTx tokens from the World Mobile Operational Reserve.

*The quantity of tokens allocated to each Unity Node shall be determined based on the market price of WMTx and MNTx on the secondary market at the time of purchase.

Unity Licenses

Unity Licenses enable operators to earn crypto rewards using the Unity App (iOS & Android). Rewards are withdrawable in a selection of partnered popular cryptocurrencies.

Verification process:

- Install the Unity Application.

- Dial the Unity number directly through the app with no phone bill charges. Plans range from $1.99 to $3.99 per month.

- Calls contribute Proof-of-Work by verifying the global telecoms grid and identifying problems.

- Every documented fault is hashed to WMChain for proof and auditability.

Digital Lease:

Unity License NFTs can be leased digitally, with Unity Node Operators setting reward percentages via in-app agreements.

UNITY

Market & Economics

The Global Telecommunications Market

The global telecommunications industry is valued at approximately $2 trillion annually. Unity's decentralised edge design enables unmatched global verification scale, positioning Unity as the preferred partner for carriers worldwide. By combining decentralisation, transparency, and provable on-chain data, Unity provides world class network architecture that is unavailable elsewhere.
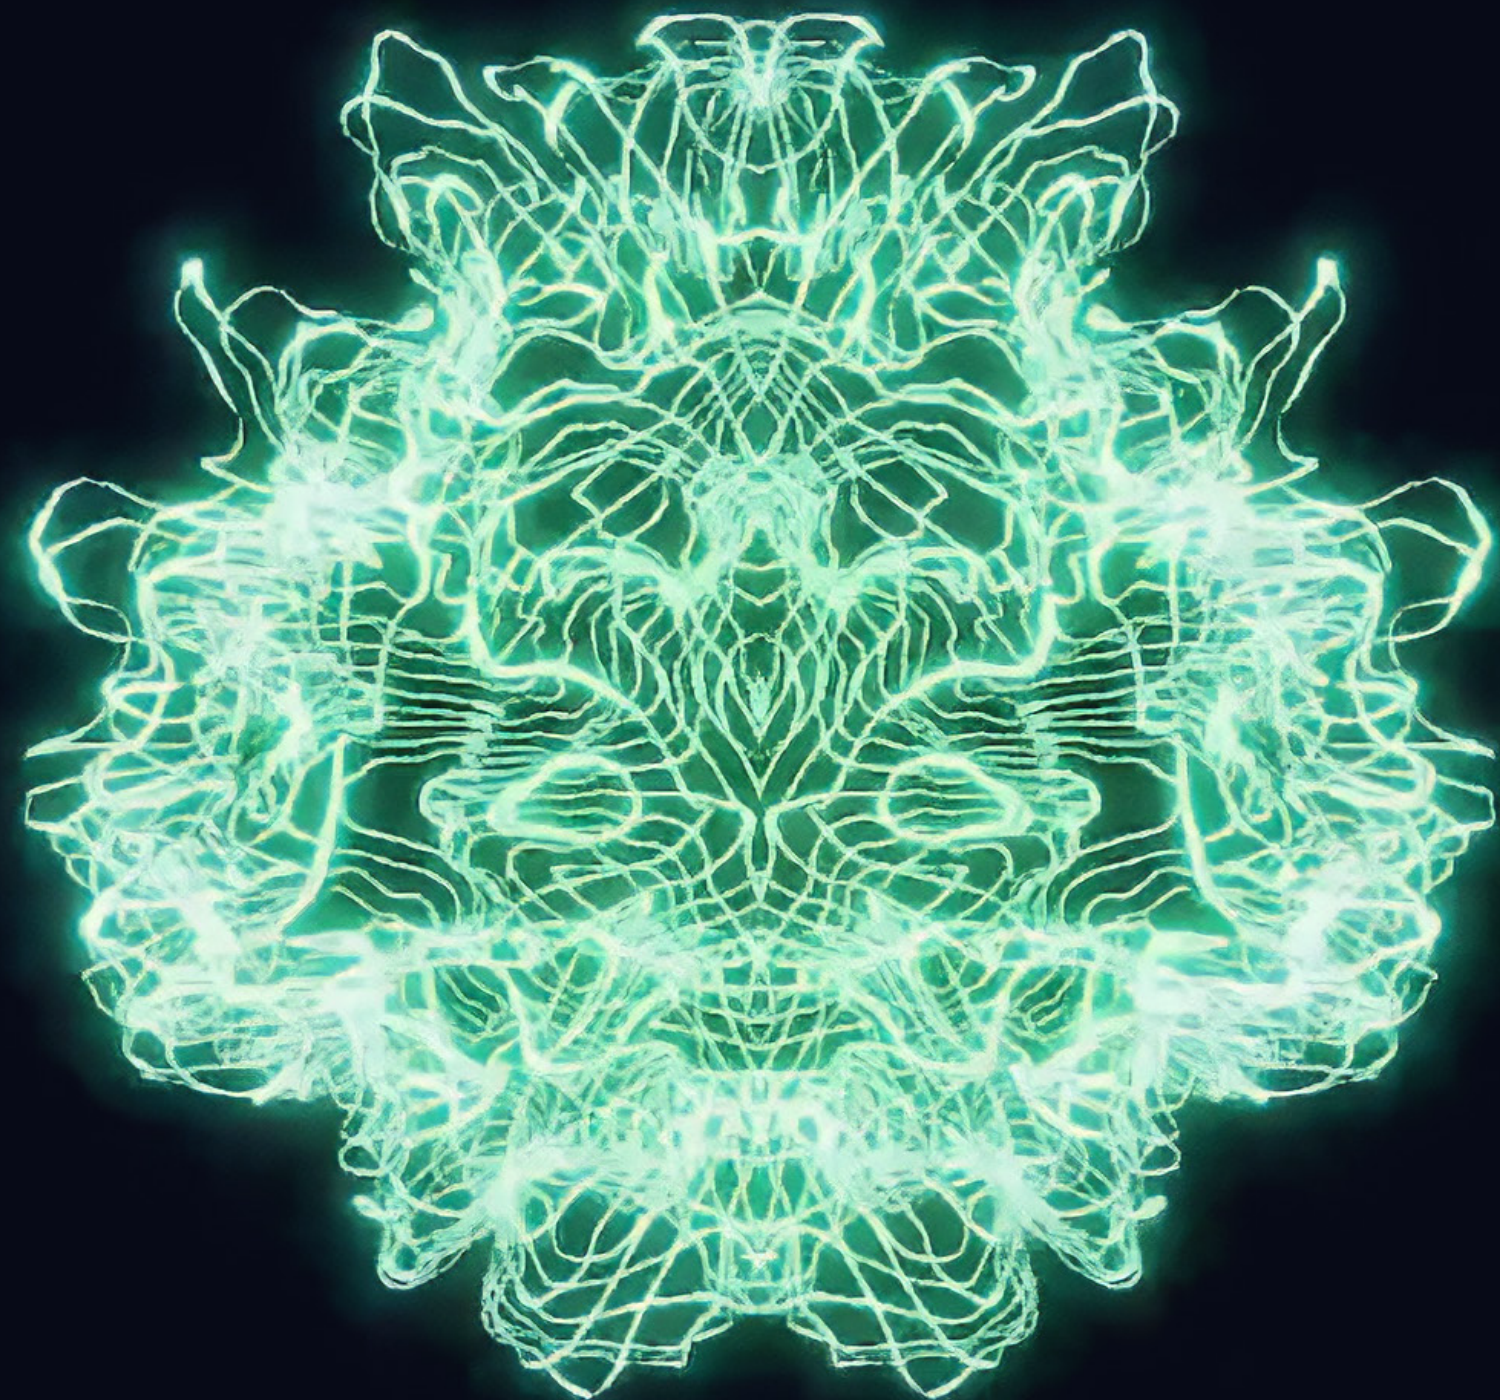

Proof of Work

Unity ties real-world telecom demand to community rewards:

- Unity provides decentralised telecom services to carriers and generates network service fees.

- Unity License Operators earn 75% of the network service fees they generate. If their license is leased, a portion of those fees flows back to the connected Node Operator.

- Unity Node Operators are rewarded from leased or active Unity License Operators.

- 25% of all network service fees are pooled and transferred to WMTx and MNTx to support the network's Switch, Validation, and Earth Node operator pools.

Unity Nodes do not dilute existing MNTx and WMTx pools - instead, they strengthen them with fees generated by Unity's edge mobile phone network.
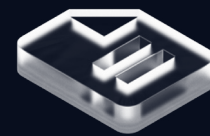

Values & Operations
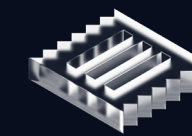

Telecom's First Decentralised Backbone

Scarcity

Only 6,000 Unity Nodes exist, each with 200 Unity Licenses.

Proof of Work

Supporting global telecommunications.

On-Chain Proof

All issues documented and hashed to WMChain for verifiable integrity.
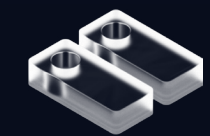

Utility-Driven Rewards

Powered by fees generated through services to global Tier-1 and Tier-2 carriers.

NFT Ownership

Both Unity Nodes and Licenses are NFTs - transferable, sellable, leasable.

Staked Tokens Included

$1,875 MNTx + $1,875 WMTx tokens per Node, locked and staked for 24 months.*

*(Subject to the price of WMTx and MNTx at the moment of purchase.)

Instant Rewards

Withdraw your rewards in a selection of partnered cryptocurrencies.

Fuelling MNTx & WMTx

25% of the carrier fees generated are transferred to WMTx & MNTx.
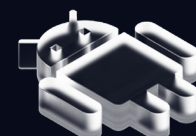

Simple Installation

Unity is compatible with mobile phones running Android & iOS.
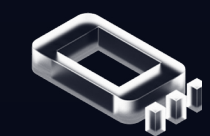

Switch Nodes

Switch Nodes manage the initiation and routing of calls across the global telecom grid.
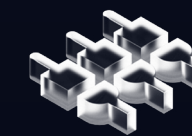

Validation Nodes

Validation Nodes confirm the integrity and connectivity of the edge mobile devices.

Earth Nodes

Detected issues are logged, encrypted, and auto-reported by Earth Nodes, with carrier and API access.

01

Unity App (iOS & Android)

Users install the Unity App.

App Instructions

License Operator follows on-screen prompts to participate.

**Network Verification**

The call tests and verifies the telecom grid.

Switch Node

Sets up and routes the verification calls.

Validation Node

Confirms the integrity and connectivity of edge devices.

Problem Documented (Earth Node)

Issues stored in encrypted logs, reported to carriers, available via API.

Metadata + Hash → WMChain

Critical metadata captured, immutably hashed, stored as provable data.

On-Chain Proof

Creates a permanent, verifiable record of network faults.

Rewards Distributed

75% License Operators (Leased % → Owner) 25% MNTx & WMTx Pools.

Unity Carrier Fee Sharing Flow

Carrier Fees generated by the decentralised verification of the telecom grid, integrity testing and issue identifications.

25% MNTx & WMTx Reward Pools

Adds value from an entirely new market without diluting existing rewards.

75% Unity License Operators

Earn rewards in partnered cryptocurrencies for contributing to grid verification. If a Unity License is leased, a set percentage of the rewards generated by those License Operators flows back to the Node Operator who owns the license.

X%

Leased Licenses Rewards share

Unity Node Operators

Unity Node Operators get rewarded from leased Unity License Operators.

Conclusion

Unity License Operators verify and strengthen the telecom grid while generating rewards. By participating in the network, they prove work, document issues on-chain, and support the MNTx and WMTx sharing economies.

Unity leverages three existing ecosystems to power its global decentralised edge network.

Switch Nodes

Switch Nodes manage the initiation and routing of calls across the global telecom grid.
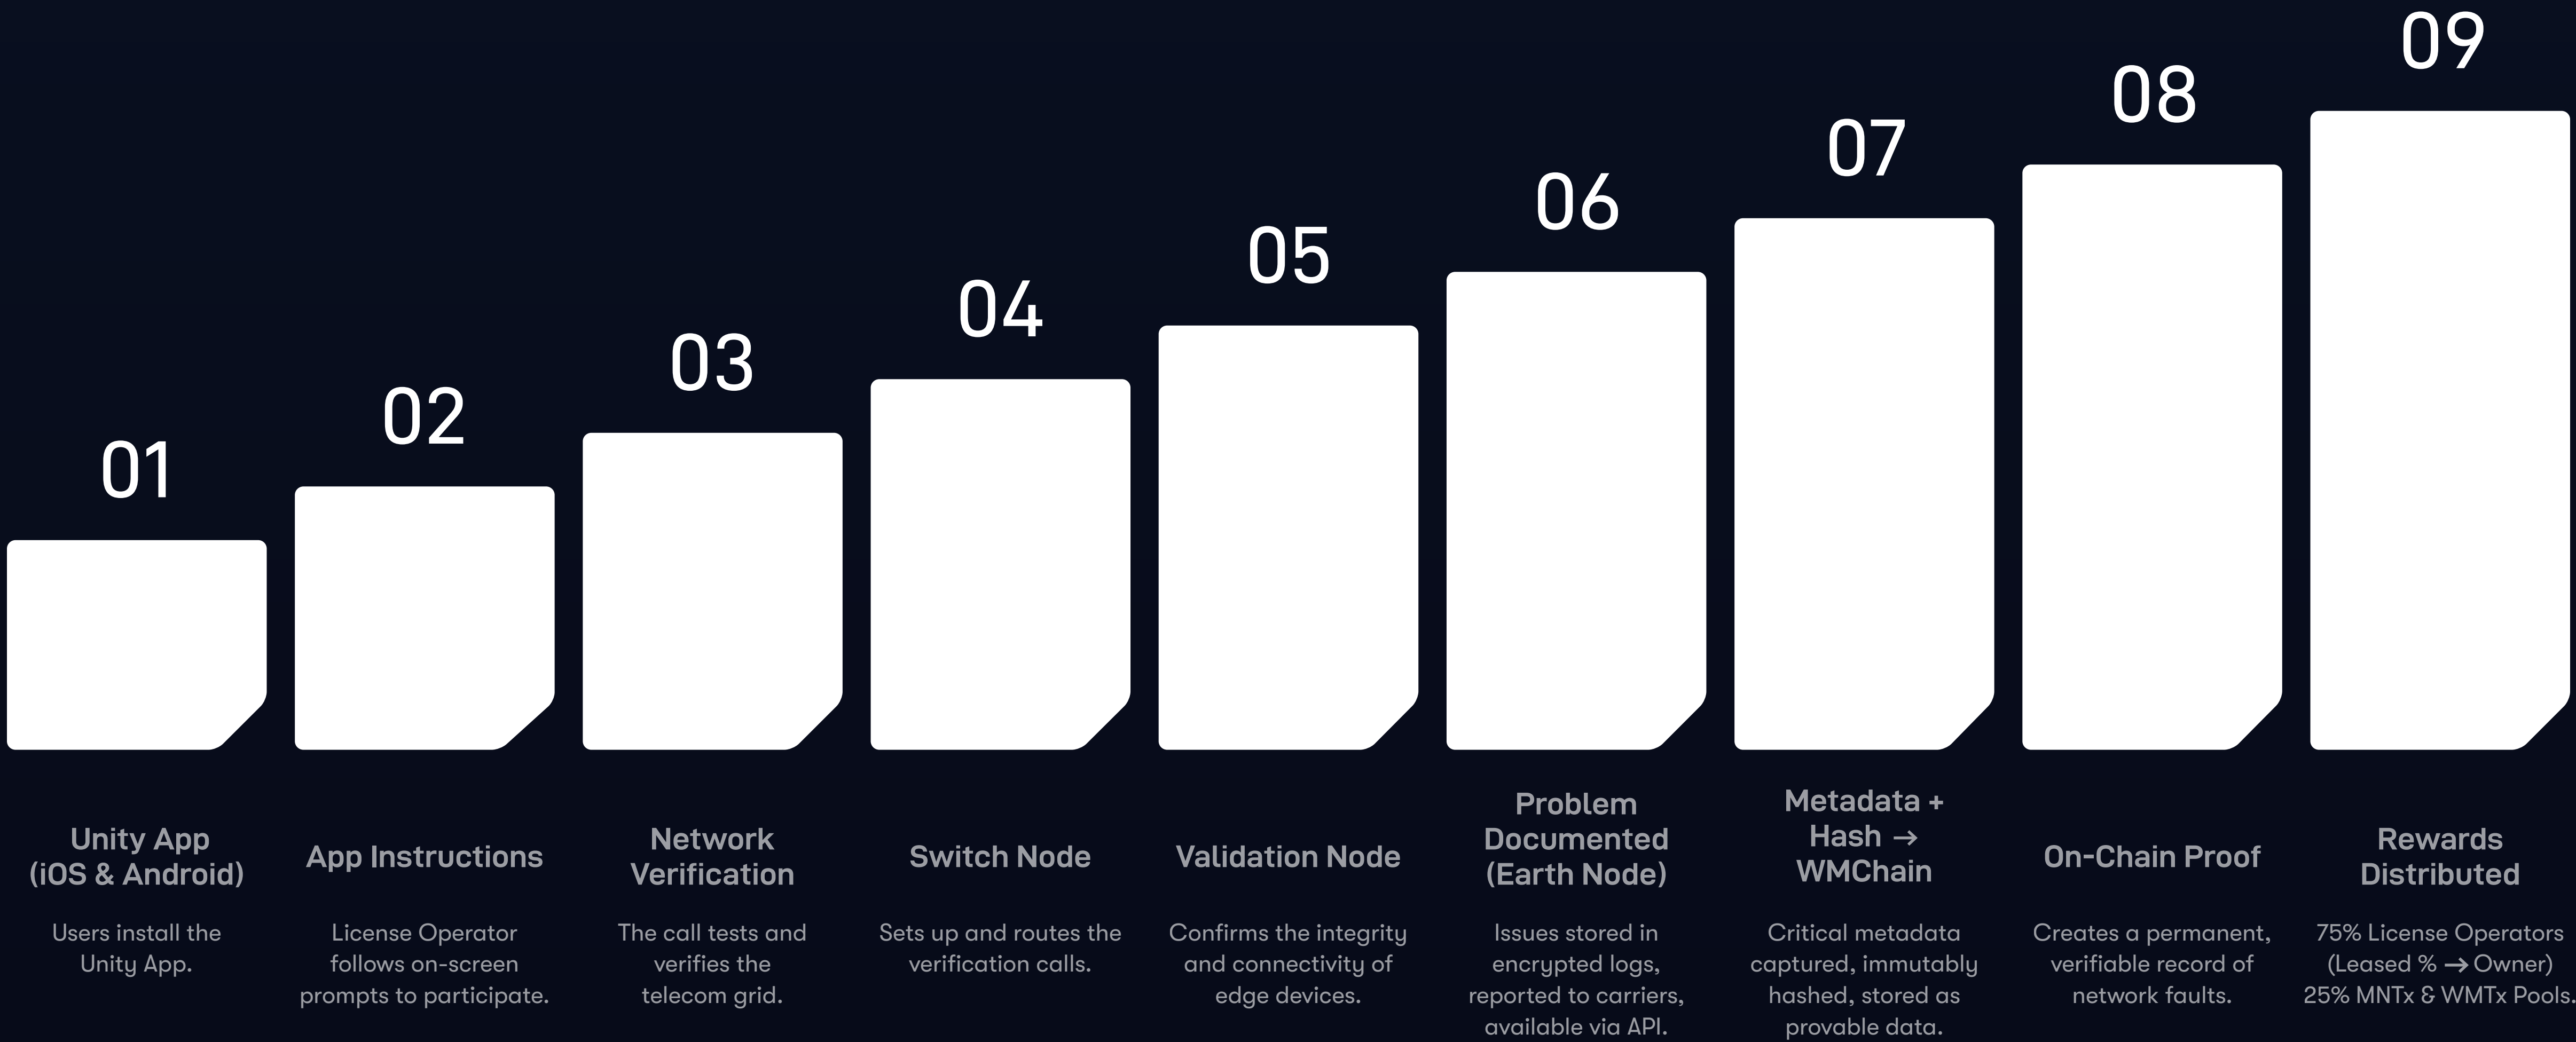

Validation Nodes

Validation Nodes confirm the integrity and connectivity of the edge mobile devices.

Earth Nodes

Detected issues are logged, encrypted, and auto-reported by Earth Nodes, with carrier and API access.

Together, these nodes form the backbone of Unity's decentralised verification and problem-identification system, ensuring accuracy, transparency, and real-world impact.

More Utility. More Revenue. More Rewards.

Unity represents a symbiotic partnership between Minutes Network Token
and World Mobile Chain, benefiting both equally.
